<b>ICS :</b>			
<b>National Ref :</b>	PNE 83520		
<b>Title :</b>	Determination of cracking resistance, tenacity and residual resistance using the Barcelona method by control of vertical displacement. Empirical correlations between the UNE-EN 14651:2007+A1:2008 flexotraction test and the Barcelona method for quality control.		
<b>Scope :</b>	The purpose of this standard is to define a Barcelona test method to determine the cracking resistance, toughness and residual tensile strength of fibre-reinforced concrete by means of a double punching test on a cylindrical or cubic specimen.		
	Unlike the method proposed in UNE 83515:2010, which requires the use of an extensometric chain to measure the total opening of the cracks, the method proposed in this standard is based on the control of the vertical displacement of the piston through which the load is applied, being the vertical displacement and the load the two parameters that are measured during the execution of the test.

<b>Title :</b>	Insulated power cables and flexible cords - Systems for the designation of types of cables		
<b>Scope :</b>	NEN 3207 provides two systems for composing designations for electric cables and flexible cords which contain an abbreviated description of their construction and the materials used in these cables and flexible cords. Furthermore, this standard contains examples and designations showing how these designations are composed. This standard applies to insulated electrical cables and flexible cords intended for use in power installations. The standard applies both to non-harmonised cables and flexible cords (Section II) and harmonised cables and flexible cords (Section III).

**Title :** Business preparedness — Management systems for preparedness management — Requirements and guidelines  
**Scope :** This document outlines the requirements and recommendations that companies need to follow to ensure good preparedness. It includes aspects such as contingency planning, including the placement and training of personnel, exercises, information sharing, and mobilization. The aim is for companies to maintain operations during crisis situations and heightened readiness, as well as to understand how various types of societal disruptions affect businesses. The standard will facilitate the coordination of Swedish companies within critical sectors by increasing flexibility to support activities beyond their own operations. The standard will be based on current guidelines and assumptions applicable to total defense.
